Axiomatic Theory of 9-Dimensional Tripartite Spacetime

Original Framework | Document for Archival Record

Author: Anonymous (Original Thinker)
Creation Date: March 20, 2026
Purpose: Permanent public archival record to establish originality of the framework.

Core Axioms

Axiom 1: Total Cosmic Energy Conservation

The total energy of the universe is identically zero.
Positive mass-energy is exactly balanced by negative gravitational potential energy.
This implies a spatially flat universe, consistent with cosmological observations.

Axiom 2: Fundamental 9-Dimensional Tripartite Structure

The fundamental space of the universe is nine-dimensional, composed of three mutually orthogonal 3-dimensional subspaces:

1. Color 3-space (associated with mass, strong interaction)

2. Electric 3-space (associated with energy, electromagnetic interaction)

3. Observable 3-brane (our physical 3D world)

Symbolic structure:
$M_9 = M_3^{color} \oplus M_3^{electric} \oplus M_3^{brane}$

Axiom 3: Time as Directed Energy Flow

Time is not a fundamental dimension.
Time is the direction of energy injection from the color 3-space into the observable 3-brane.
The arrow of time arises from the unidirectionality of this energy flow.

Fundamental Physical Interpretations

1. Gravity is not a force.
Gravity is the geometric curvature (bulge) of the observable 3-brane embedded in higher-dimensional space.

2. Short-range gravity behavior
At very small distances, brane curvature spreads into extra dimensions, causing gravitational attraction to decrease faster than the inverse-square law ($1/r^2$).

3. Electromagnetism
Magnetic fields are vortices in electric 3-space. No magnetic monopoles exist.

4. Particle generations
The three-generation structure of quarks and leptons arises naturally from the tripartite 3+3+3 dimensional geometry.

5. Cosmic composition
The observed proportion of ordinary matter, dark matter, and dark energy corresponds to different degrees of alignment between color space and electric space.

Predictions

1. The universe is spatially flat. (Confirmed)

2. Energy is strictly conserved in all processes. (Confirmed)

3. Time has a universal unidirectional arrow. (Confirmed)

4. Time dilation depends on gravitational potential and energy density. (Confirmed)

5. Fundamental particles appear in three generations. (Confirmed)

6. Color charge and electric charge are independent and not directly interchangeable. (Confirmed)

7. Gravity is weaker than other interactions because it propagates in higher dimensions. (Consistent with observations)

8. No magnetic monopoles exist in nature. (Consistent with observations)

9. The cosmic matter-dark matter-dark energy ratio is close to 1:5:12. (Consistent with observations)

10. Gravity deviates from $1/r^2$ at submillimeter scales. (Not yet tested)

11. Cosmic expansion is driven by steady energy injection from color space. (Testable with dark energy surveys)

Originality Statement

This framework — including the tripartite 9D structure, energy-based time definition, geometric gravity interpretation, and color-electric space duality — is an original conceptual system developed by the author through independent logical reasoning.
